GMS RIM/RIM DUMMY CYLINDERS

GMS Rim Cylinders

GMS rim-mounted cylinders are engineered for dependable performance across storefronts, commercial doors, and rim-mounted hardware. Each cylinder is manufactured with precision-machined brass components to ensure smooth operation and long-term durability. Its precise fit and robust build make it an ideal choice for high-traffic environments requiring long-lasting security.

GMS Rim T-Turn Cylinders

The GMS Rim T-Turn Cylinder offers a convenient thumb-turn solution for interior operation without requiring a key. Ideal for applications where quick, non-keyed egress is needed, the T-Turn supports ADA classroom setups by enabling interior control while maintaining secure exterior access through the keyed cylinder.

GMS Rim Dummy Cylinders

GMS Rim Dummy Cylinders provide a clean, finished appearance where keyed access is not required. Built to match the profile and finish of active rim cylinders, they ensure hardware consistency and are commonly used in ADA classroom configurations where the exterior requires a uniform look without active locking functionality.
